Encrypt the Data Files

According to the best practice, you should encrypt all the data files. In this lab, we only encrypt the **USERS** tablespace in the pdb.

1. Connect to the orclpdb, check the encrypt status of the tablespace.

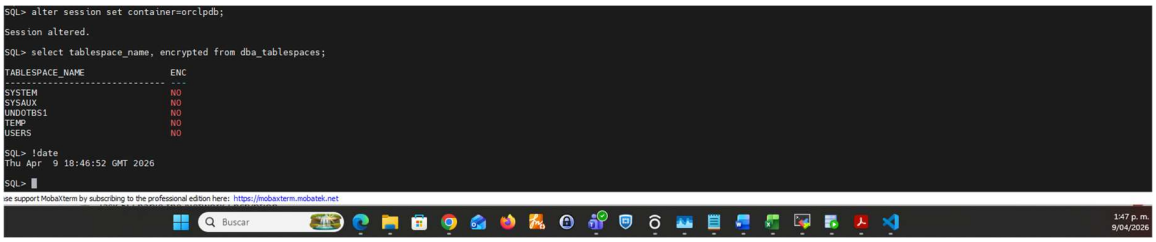
   SQL> **alter** session **set** container=orclpdb;

   Session altered.

   SQL> **select** tablespace_name, encrypted **from** dba_tablespaces;

TABLESPACE_NAME	ENC
SYSTEM	**NO**
SYSAUX	**NO**
UNDOTBS1	**NO**
TEMP	**NO**
USERS	**NO**

From the primary:

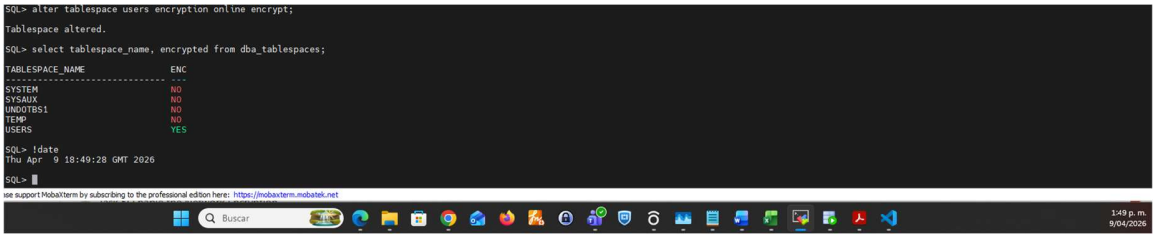


2. Run the command to encrypt the USERS tablespace online, then check the status. You can see the USERS tablespace has already encrypted.

   SQL> **alter table**space users encryption online encrypt;

   Tablespace altered.

   SQL> **select** tablespace_name, encrypted **from** dba_tablespaces;

TABLESPACE_NAME	ENC
SYSTEM	**NO**
SYSAUX	**NO**
UNDOTBS1	**NO**
TEMP	**NO**
USERS	YES


From the primary:
